

**Ulrich Dah-Achinanon** is a master's student at Polytechnique Montreal. He received a bachelor's degree in computer engineering from Polytechnique Montréal, QC, CA. His research interests include swarm robotics systems design more specifically UAV control.

**Seyed Ehsan Marjani Bajestani** is currently a Ph.D. Candidate in Computer Engineering with the MIST Lab at Polytechnique Montreal. His research is focusing on event-based multi-robot perception. He is an Executive Committee member of the International RoboCup Federation in the soccer robots MSL since 2016.

**Pierre-Yves Lajoie** is a PhD student at Polytechnique Montreal. He is particularly interested in the challenges in artificial intelligence and/or computer vision including photogrammetry, SLAM, robust state estimation, distributed (multi-robot) perception, semantic segmentation and other applications of deep learning. He has extensive experience in computer vision, GPU programming and robotics and 2 journal publications as first author on robust Simultaneous Localization and Mapping systems.

**Giovanni Beltrame** obtained his Ph. D. in Computer Engineering from Politecnico di Milano in 2006. He worked as microelectronics engineer at the European Space Agency on a number of projects, spanning from radiationtolerant systems to computer-aided design. Since 2010 he is Professor at Polytechnique Montreal with the Computer and Software Engineering Department, where he directs the MIST Lab. His research interests include modelling and design of embedded systems, artificial intelligence, and robotics. He was awarded more than 25 grants by government agencies and industry, and has published more than 100 papers in international journals and conferences.
